

COURTEGE™ REDUCERS

21 Vally Court Chico, CA 95973

CourtEdge™ Reducers

SafePath™ offers some of the largest reducers available. Our reducers range from ½" to 2-3/4" as a single part. We can also design for greater heights that come in two-part models and these can range up to 5-1/2" in height.

CourtEdge™ Reducers provides a safe and easy transition from the playing surface to the original floor reducing injury to athletes and spectators with these exciting new "green" slip resistant ADA compliant and non-compliant products. Installation is accomplished in minutes with high-grade silicone adhesive. CourtEdge™ Reducers are designed to be affixed to the vertical sides of hydroscopic flooring systems allowing for expansion and contraction of substrate flooring material.

These products are available in standard sizes that are fixed lengths and widths. These parts are molded with thousands of pounds of pressure that provide an extremely durable part with no load weight limitations. CourtEdge™ Reducers are available in multiple sizes, dimensions and patterns. Following, you will find a listing of the products SafePath™

offers. Simply determine the length and the height of the product you need and order the units required for your project.

Whether it's interior or exterior, CourtEdge™ Reducers will never freeze, crack, or splinter like other flooring transition products, and never requires the use of mechanical fasteners.

How Custom CourtEdge™ Reducers are Created:

For custom height reducers, we laminate reducer material to rubber flat stock to make multiple-part products up to 5-1/2" in height

Custom CourtEdge™ Reducers should be made from similar patterns to provide for constant surface pattern.

Types of Inside & Outside Corners that can be created with 1/2", 3/4" & 7/8" CourtEdge™ Reducers
